The global BMC for Rail Transit market size is predicted to grow from US$ 147 million in 2025 to US$ 198 million in 2032; it is expected to grow at a CAGR of 4.5% from 2026 to 2032.

In rail transit, Bulk Molding Compound (BMC) is a high-performance composite material used for manufacturing electrical equipment enclosures. It offers excellent electrical insulation, heat resistance, and impact strength. BMC is primarily utilized in the production of enclosures for electrical devices such as substations and distribution boxes, ensuring the safe operation of equipment. The application of BMC materials enhances the reliability and durability of devices, reducing maintenance costs.

In 2024, global BMC for Rail Transit production reached approximately 106 k tons, with an average global market price of around US$1300 per ton. This product typically has a single-line production capacity of approximately 3,000-8,000 tons, with an industry gross profit margin of approximately 10%-20%. Raw materials account for the largest portion of its cost structure (70-90%). The upstream components of this product include unsaturated polyester resins, vinyl ester resins, glass fiber, and fillers such as calcium carbonate and aluminum hydroxide. Downstream, it can be used to manufacture electrical insulation components (such as insulators and terminal blocks), as well as glass fixing blocks for escalators.
