A BMS (Battery Management System) Testing System is a set of tools and technologies used to evaluate the performance, reliability, and safety of a Battery Management System (BMS). A BMS is an electronic system that manages the rechargeable battery (commonly used in electric vehicles, renewable energy storage, or other high-power applications) by monitoring its state, controlling its charging and discharging, balancing cells, and ensuring the battery operates within safe parameters.

The BMS Testing System verifies that the BMS is functioning correctly, ensuring the battery system operates efficiently and safely over its lifecycle. It simulates real-world conditions and stresses the BMS to ensure it responds correctly to a wide range of situations.
