A Board Level Shield (BLS) is the most efficient and least expensive shielding solution and is used closest to the source of the problem. Board Level Shields (BLS) are designed to help optimize protection while meeting application requirements. In addition to a shielding of the electronic housing it may be useful or even necessary to shield the interference source directly on the Printed Circuit Board. This is often required to comply with current EMC laws relating to outgoing and incoming radiation and / or to guarantee the safe function of the assembly.
