The global Boat Fuel Injected Outboard Motors market size is predicted to grow from US\$ 4842 million in 2025 to US\$ 5841 million in 2032; it is expected to grow at a CAGR of 2.8% from 2026 to 2032.

An outboard motor is a propulsion system for boats, consisting of a self-contained unit that includes engine, gearbox and propeller or jet drive, designed to be affixed to the outside of the transom. They are the most common motorised method of propelling small watercraft. As well as providing propulsion, outboards provide steering control, as they are designed to pivot over their mountings and thus control the direction of thrust. The skeg also acts as a rudder when the engine is not running. Unlike inboard motors, outboard motors can be easily removed for storage or repairs. This report only covers Fuel Injected Outboard Motors fueled by diesel, gas, etc.

North America occupied the largest revenue market share. It is followed by Europe, and Asia-Pacific, while other regions have smaller market.

During the covid-19 pandemic, increased interest in boating drive the sales of Outboard Motors to historical levels, as more and more Americans began to get into the water, whether by taking new ships or using new motors to re power used ships. While the market is decreased in 2021 due to shutdowns and labor shortages impacted by COVID-19, and the inventory has been emptied in 2020. But in the coming years the gas powered outboard engine sales remained strong due to high consumer demand for boating.
