The global Boat Gyro Stabilizer market size is predicted to grow from US$ 199 million in 2025 to US$ 269 million in 2032; it is expected to grow at a CAGR of 4.5% from 2026 to 2032.

A boat gyro stabilizer is a mechanical system installed on vessels to reduce rolling motion caused by waves, improving comfort, safety, and stability at sea. It uses a rapidly spinning flywheel (the gyroscope) mounted inside a sealed sphere; as the boat begins to roll, the gyroscope's angular momentum generates a counteracting torque that resists the roll. Unlike traditional fin stabilizers, gyro stabilizers work even at low or zero speeds, making them especially useful for yachts, fishing boats, and leisure craft. By minimizing roll, they help reduce seasickness, protect onboard equipment, and enhance overall vessel performance.

Our estimate for global boat gyro stabilizer shipments in 2024 is 4000 units, with an average selling price (ASP) of ?$50k.

United States market for Boat Gyro Stabilizer is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
