The trend in boat varnishes for wood substrates is moving towards more environmentally friendly and sustainable options. There is a growing demand for varnishes that are low in volatile organic compounds (VOCs) and do not contain harmful chemicals. Water-based varnishes are becoming increasingly popular as they have lower VOC emissions and are easier to clean up. These varnishes are also more resistant to yellowing and provide a durable finish. Another trend is the use of varnishes that contain natural oils and resins, such as linseed oil or tung oil. These varnishes are biodegradable and have a lower environmental impact compared to traditional varnishes. They also provide excellent protection against UV rays and water damage.
