Body Sensor Patches (skin patches/electronic skin patches) are wearable products attached to the skin. The electronic element involves the integration of electronic functionality such as sensors, actuators, processors and communication, allowing the devices to become connected and 'smart'. In many ways, skin patches act as the ultimate wearable electronic devices, augmenting the wearer with minimal encumbrance and maximum comfort.

Body sensor patches are thin, smart, flexible products that are attached to the skin using biocompatible adhesives and are widely used for remote monitoring in inpatient and outpatient cases. Electronic skin patches are most commonly used in diabetes management and cardiac monitoring. These patches are also used for motion and

position sensing, temperature sensing, smart wound care, and drug and cosmetic delivery. As compared to conventional wearable devices, these skin patches are lighter, compact, comfortable, and less intrusive for the patients.
