Boehmite coating material is a type of alumina-based substance, primarily composed of aluminum oxide hydroxide (AlOOH). It is widely used in advanced applications due to its excellent thermal stability, chemical resistance, and insulating properties. Boehmite coatings are commonly applied as protective layers or functional coatings in industries such as electronics, aerospace, and energy storage. In lithium-ion batteries, for example, boehmite coatings are used to enhance the safety and performance of separators by providing heat resistance and preventing thermal runaway. Additionally, boehmite is utilized in catalyst support, flame retardants, and corrosion protection, making it a versatile material in high-performance coatings.
