According to our LPI (LP Information) latest study, the global Boiler market size was valued at US\$ million in 2023. With growing demand in downstream market, the Boiler is forecast to a readjusted size of US\$ million by 2030 with a CAGR of % during review period.

The research report highlights the growth potential of the global Boiler market. Boiler are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Boiler. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Boiler market.

This report mainly studies industrial boilers. There are two types of industrial boiler products. One is steam, which is used for power generation or gas supply. For example, a chemical fertilizer plant can use steam to vaporize and use coal as a raw material to synthesize chemical fertilizer. This is a typical industrial boiler. Coal-fired boilers still account for the majority, and gas-fired waste heat boilers are generally used to recover waste heat. A common industrial boiler is a circulating fluidized bed boiler. Industrial boilers are important thermal power equipment, and our country is the country that produces and uses the most boilers in the world today.

This report only includes boiler equipment, not engineering service market information.
