The global Boiler Softened Water Equipment market size is predicted to grow from US\$ 36390 million in 2025 to US\$ 60410 million in 2031; it is expected to grow at a CAGR of 8.8% from 2025 to 2031.

Boiler Softened Water Equipment, also known as water softening systems or water treatment systems, is a type of equipment used in industrial and commercial settings to reduce the hardness of water before it is used in boilers or other industrial processes. Hard water contains high levels of dissolved minerals, primarily calcium and magnesium ions, which can lead to scale buildup and decreased efficiency in boiler systems. Boiler softened water equipment is designed to remove or reduce these minerals to prevent scale formation and ensure the efficient operation of boilers and associated equipment.

Water treatment equipment is being designed with a focus on sustainability. This includes the use of more eco-friendly materials, reduced water and salt consumption during regeneration cycles, and systems that minimize wastewater discharge.
