The global Boiler-Specific Oil Burner market size is predicted to grow from US\$ 503 million in 2025 to US\$ 814 million in 2032; it is expected to grow at a CAGR of 7.3% from 2026 to 2032.

In 2025, the global production volume of boiler-specific oil burners reached 190,000 units, with an average selling price of US\$2,705 per unit. A boiler-specific oil burner is a combustion device designed to atomize liquid fuel, mix it with air in precise proportions, and ignite the mixture to generate a stable flame within a boiler's combustion chamber. Applicable fuels include light distillate oils as well as blends of these with liquid biofuels and higher-boiling-point petroleum fuels that require preheating to achieve effective atomization. The core technical focus lies in the quality of oil/air atomization, air-to-fuel ratio control, ignition safety, and combustion stability. Applications span both steam boilers and hot water boilers, serving sectors such as manufacturing (for process steam), food processing, chemicals, utilities, commercial heating, and select residential heating/hot water systems. The upstream segment primarily involves fuel supply, nozzles, oil pumps, blowers, electric motors, igniters, flame detectors, controllers, valves, burner housings, and combustion head materials; the midstream segment encompasses burner design, assembly, commissioning, and certification; while the downstream segment connects to steam boilers, hot water boilers, thermal fluid heaters, heat exchangers, and associated heating/process systems. Gross margins range from approximately 18% to 30%.
