A boiler or steam generator is a device used to create steam by applying heat energy to water. A boiler or steam generator is used wherever a source of steam is required.

The global boiler, turbine & generator market is fueled by the rising dependency on thermal power, which is anticipated to spur product demand. The growing industrialization, particularly in Asia Pacific is expected to encompass extensive boiler, turbine, and generator (BTG) equipment applications in the industries including power & energy. The capitalistic mindset of numerous manufacturers may instigate them to adopt the existing power generation techniques and may positively impact industry growth. However, firms may soon have to take alternative measures for energy

production, thereby impeding the industry growth, which can be attributed to rising concern for sustainable energy and stringent governmental regulations about emissions.
