The global Bolt Loosening Sensor market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The bolt loosening sensor is a sensor that can detect the bolt status (such as looseness) in real time and transmit information to the system. It can determine whether the bolt is loose by sensing small changes in the bolt connection, such as vibration, displacement or screw-out angle. It has the characteristics of high precision, remote monitoring, waterproof and dustproof, and easy installation. It is widely used in various equipment that requires bolt connection, including automobile manufacturing, wind power generation, bridge construction, aerospace, etc.
