According to our LPI (LP Information) latest study, the global BOM Software market size was valued at US\$ million in 2023. With growing demand in downstream market, the BOM Software is forecast to a readjusted size of US\$ million by 2030 with a CAGR of % during review period.

The research report highlights the growth potential of the global BOM Software market. BOM Software are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of BOM Software. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the BOM Software market.

A software bill of materials (software BOM) is a list of components in a piece of software. Software vendors often create products by assembling open source and commercial software components. The software BOM describes the components in a product. It is analogous to a list of ingredients on food packaging. The concept of a BOM is well-established in traditional manufacturing as part of supply chain management. A manufacturer uses a BOM to track the parts it uses to create a product. If defects are later found in a specific part, the BOM makes it easy to locate affected products.

One trend propelling growth in this market is the incorporation of PLM software into enterprise and MES software. The integration of PLM software with enterprise and

manufacturing execution systems (MES) software is an effective method that will boost the growth in the market. The integration enables better transparency across business units and helps to save time.
