The Production is about 7,000 km. A Bonded Offshore Flexible Hose is a multi-layered pipeline where all layers are chemically or mechanically bonded together to function as a unified structure. It typically consists of an inner liner for fluid transport, reinforcement layers for pressure containment, and an outer protective layer for environmental resistance. This design provides high flexibility, strength, and resistance to external and internal pressures, making it ideal for onshore and offshore applications, including oil and gas transportation, chemical processing, and water distribution. Unlike unbonded flexible pipes, bonded pipes offer a fully integrated structure, reducing the risk of layer separation and ensuring reliable performance in dynamic and static operations.
