The global Bonded Samarium Cobalt Magnet market size is predicted to grow from US\$ 389 million in 2025 to US\$ 558 million in 2032; it is expected to grow at a CAGR of 5.4% from 2026 to 2032.

Bonded samarium cobalt (SmCo) magnet is a permanent magnet prepared through powder metallurgy technology, in which samarium cobalt alloy powder is mixed with an organic binder and then pressed and heat treated to form the final magnet shape. This preparation technique allows for the fabrication of complex shapes and sizes, as the powder can be molded into almost any desired shape.

According to market research reports, the global samarium cobalt magnet market has continued to grow over the past few years and is expected to continue growing in the coming years. This is mainly due to the rapid development of the electronic equipment industry and the increasing demand for magnet materials in the aerospace, environmental protection and new energy industries. In addition, with the continuous development of the market, the development of new samarium cobalt magnet materials to meet the needs of different fields will become an important development direction of the market. These new materials may have higher magnetic energy product, better temperature stability or lower cost to meet the needs of different customers. In short, the bonded samarium cobalt magnet market will continue to grow.
