BOPP (Biaxially Oriented Polypropylene) heat shrinkable film is a type of plastic film that is widely used for packaging applications. It is made from polypropylene resin that has been stretched in both the machine direction (MD) and transverse direction (TD), resulting in a film with enhanced strength, clarity, and dimensional stability.

The heat shrinkable property of BOPP film means that when exposed to heat, it can shrink and conform tightly to the shape of the object or product it is wrapped around. This shrinkage occurs due to the release of internal stresses within the film during the manufacturing process.
