In 2025, global sales of BOPP stretch film production lines reached 420 units, with a total capacity of approximately 610 units and a gross profit margin between 18% and 22%. A BOPP stretch film production line is an industrial piece of equipment used for the continuous extrusion, biaxial stretching, and orientation processing of polypropylene films. It primarily forms film preforms by melt-extruding polypropylene granules, followed by longitudinal and transverse stretching processes to improve film strength, transparency, and barrier properties. Upstream raw materials mainly include polypropylene resin, additives, and lubricants, while downstream consumption is mainly in the packaging, food preservation, printing, and labeling industries. Downstream customers are concentrated in the FMCG, pharmaceutical, and electronic packaging sectors, with supply models primarily involving complete line sales and customized production services.

Market demand continues to grow, particularly in the application of environmentally friendly, high-transparency, and high-barrier films. Future growth can be achieved through energy-saving production line upgrades, integrated composite film production, and the development of functional films to achieve added value and market expansion.
