Thermal lamination films have extrusion coated surface with low temperature melting resin, which enables the lamination of film to paper products by heat and pressure. All lamination films used for wet lamination are pre-treated on both sides for subsequent converting (hot stamping, embossing, UV spot varnishing, etc.). The films are slip modified for high speed lamination and have good anti-static properties. The films also have excellent adhesive anchorage which in turn supports excellent bonding with paper. These films are available in BOPP base.
