A borehole camera is a specialized camera system designed to capture images and videos of the inside of a borehole or well. It is typically used in various industries, including geology, mining, water exploration, and environmental monitoring.

The camera is attached to a cable or probe that is lowered into the borehole. It is equipped with a high-resolution camera and LED lights to illuminate the surroundings. The camera can rotate and tilt to capture a 360-degree view of the borehole.

Borehole cameras are used to inspect the condition of the borehole, identify any obstructions or damages, and gather visual data about the geological formations, water levels, or potential resources present in the borehole. The images and videos captured by the camera can provide valuable information for decision-making, planning, and analysis in various industries.
