The global Boron Amino Acid Chelate market size is predicted to grow from US\$ 77.48 million in 2025 to US\$ 131 million in 2032; it is expected to grow at a CAGR of 7.9% from 2026 to 2032.

In 2025, global sales volume of boron amino acid chelate reached approximately 23,600 tonnes, with the global average market price at around USD 3,356 per tonne. The gross margin of major industry players was approximately 25%-45%. Boron amino acid chelate is a functional boron nutrition product that uses boron as the core nutrient and amino acids or small peptides as complexing carriers. It is commonly used in agricultural fertilizers, animal nutrition, and nutrition and health applications. Compared with conventional boron fertilizers such as boric acid, borax, and boron ethanolamine, boron amino acid chelate generally features good water solubility, higher absorption efficiency, lower foliar irritation, and better crop utilization. It is suitable for fruit trees, vegetables, oilseed crops, cotton, flowers, and certain field crops. Strictly speaking, boron is not a typical metal cation; therefore, the product is also commonly referred to in the industry as boron amino acid complex, amino acid boron, or boron-amino acid compound. Its upstream raw materials mainly include boric acid, borax, soluble boron compounds, compound amino acids, plant protein hydrolysates, individual amino acids, stabilizers, dispersants, and other auxiliary materials. Its downstream applications mainly include agricultural fertilizers, feed additives, food additives for human consumption, pharmaceuticals, and cosmetics.

United States market for Boron Amino Acid Chelate is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
