Boron is an indispensable element, mostly found in soil, water and rocks across the globe. The average soil boron concentration is in the range of 10 to 20 ppm, however most of the areas across the globe is boron deficient. High concentration of boron in soil has found in western part of the U.S. and area in between Mediterranean to Kazakhstan. The average sew water boron concentration is ranges from 0.5 to 9.0 ppm, while fresh water has very low boron concentration. Highly concentrated and economically feasible boron sources are generally found in the in arid areas with a history of volcanism or hydrothermal activities such as Turkey and United States. Open-pit mining method is used to mine large deposits of high grade beds of crude borax at the Kramer deposit in California and the Kirka deposit in Ankara, Turkey.
