The global Borosilicate Glass Wafer market size is predicted to grow from US\$ 1201 million in 2025 to US\$ 1417 million in 2031; it is expected to grow at a CAGR of 2.8% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Borosilicate glass wafers are widely used for the process of anodic bonding of silicon with glass, so that the silicon's thermal expansion is alike to these materials. Borosilicate glass wafers were developed for thin film electronic circuits, which require an extremely smooth surface with special electrical properties. The general application of thin and ultrathin Borosilicate glass wafers is an electronic packaging of optoelectronic conductors.

Following a strong growth of 26.2 percent in the year 2021, WSTS revised it down to a single digit growth for the worldwide semiconductor market in 2022 with a total size of US\$580 billion, up 4.4 percent. WSTS lowered growth estimation as inflation rises and end markets seeing weaker demand, especially those exposed to consumer spending. While some major categories are still double-digit year-over-year growth in 2022, led by Analog with 20.8 percent, Sensors with 16.3 percent, and Logic with 14.5 percent growth. Memory declined with 12.6 percent year over year. In 2022, all geographical regions showed double-digit growth except Asia Pacific. The largest region, Asia Pacific, declined 2.0 percent. Sales in the Americas were US\$142.1 billion, up 17.0% year-on-year, sales in Europe were US\$53.8 billion, up 12.6% year-on-year, and sales in Japan were US\$48.1 billion, up 10.0% year-on-year. However, sales in the largest

Asia-Pacific region were US\$336.2 billion, down 2.0% year-on-year.
