The global Bottle Counting Machine market size is predicted to grow from US\$ 410 million in 2025 to US\$ 752 million in 2032; it is expected to grow at a CAGR of 10.1% from 2026 to 2032.

In 2025, global bottle counting machine production reached approximately 42,800 units. A bottle counting machine, also known as a tablet/capsule counting machine, is a packaging device used for automatically counting tablets, capsules, soft gels, candies, or granular products and filling them into bottles. It is mainly applied in the pharmaceutical, healthcare product, food, and daily chemical industries. The machine uses photoelectric sensing, vibration feeding, or electronic counting systems to rapidly and accurately count products and automatically fill them into packaging containers according to preset quantities, thereby improving packaging efficiency and ensuring counting accuracy. A bottle counting machine typically consists of a feeding system, counting system, conveying device, filling mechanism, and automatic control system. Depending on production requirements, it can support single-channel, multi-channel, high-speed, or fully automated production. The equipment features high counting accuracy, stable operation, adaptability to products of different specifications, and a high degree of automation. It is suitable for packaging tablets, capsules, gummies, nuts, and other granular products. With the pharmaceutical and food packaging industries moving toward intelligent operation, automation, and higher production standards, modern bottle counting machines are gradually evolving toward high-speed operation, intelligent inspection, automatic format changeover, and digital control. In addition, technologies such as vision inspection, missing-count alarms, data traceability, and online monitoring are being integrated to improve packaging consistency, reduce labor costs, and meet GMP and food safety compliance requirements. Bottle Counting Machine: US\$9,800 per unit.

The bottle counting machine market has maintained stable growth in recent years, driven by increasing packaging demand in the pharmaceutical, healthcare product, food, and functional nutrition industries. As key equipment in bottling production lines for tablets, capsules, soft gels, candies, and granular products, bottle counting machines are widely used in pharmaceutical packaging, vitamin and nutritional supplement products, dietary supplements, confectionery foods, and daily chemical granular product packaging. With companies placing higher requirements on counting accuracy, packaging efficiency, product safety, and production compliance, demand for high-speed electronic counting machines, multi-channel counting machines, fully automated bottling lines, and intelligent inspection systems continues to increase. At the same time, rising labor costs, the growing variety of bottle specifications, and frequent product changeovers are driving equipment upgrades toward automation, flexibility, intelligent operation, and digital management. In the future, the bottle counting machine market is expected to maintain stable growth, while industry competition will increasingly focus on counting accuracy, operational stability, format change convenience, cleaning and maintenance efficiency, GMP compliance capabilities, and integration with bottle unscrambling, capping, labeling, inspection, and other packaging production line systems.
