A bottom magnetic agitator is a type of mixer installed at the bottom of a vessel, using magnetic coupling to transfer torque from an external drive to an impeller inside the vessel. This design is ideal for processes requiring minimal dead space and efficient mixing. The magnetic drive eliminates the need for traditional mechanical seals, providing a fully sealed system that prevents leaks and contamination. Bottom magnetic agitators are commonly used in industries like pharmaceuticals, biotechnology, and food processing, where hygiene and aseptic conditions are crucial.
