Botox was first used as a biological weapon, and was later used by the medical community to treat facial cramps and other muscle-movement disorders. In the 1980s, the plastic surgery community expanded its function, using it to thin the face and shape the legs. China is the third country after the United Kingdom and the United States to produce its own botox cosmetic products, and began to use in 1999. In recent years, global botulinum toxin type A has developed rapidly, with an average growth rate of about 15%. In 2017, global production of botulinum toxin type A was 22.35 million bottles, with an output value of \$4 billion. The price of botulinum toxin

We expect prices to continue to fall over the next few years as domestic players get bigger and stronger and new products emerge.
