Production Capacity is about 3500 k units. An Boundary Security Fence is a high-security vehicular access-control gate engineered and certified to withstand specified levels of crash impact from hostile or unauthorized vehicles, typically using reinforced steel structures, energy-absorption mechanisms, and engineered hinge or sliding systems that maintain structural integrity under high-force collision. These gates are installed at perimeter entry points of critical facilities?such as military bases, government compounds, airports, utilities, data centers, and commercial or industrial sites requiring anti-ram protection?to regulate authorized traffic while providing a certified physical barrier against vehicle-borne threats. The upstream supply chain involves suppliers of high-strength steel, impact-resistant components, hydraulic or electromechanical drive systems, electronic control units, and fabrication services, along with civil-works contractors responsible for foundations and installation. Downstream participants include end users operating high-security facilities, security integrators that incorporate the gates into broader perimeter-security systems, maintenance service providers ensuring long-term operational reliability, and certification bodies that perform crash testing and compliance verification based on standards such as ASTM or IWA.
