Bovine bone collagen peptide refers to a type of collagen protein derived from the bones of cattle. Collagen is the most abundant protein in mammals and is a key component of connective tissues such as skin, bones, tendons, and ligaments. Bovine bone collagen peptide is produced by breaking down the collagen from bovine bones into smaller peptides through processes like enzymatic hydrolysis. These collagen peptides are often used in dietary supplements, cosmetics, and medical products due to their potential health and skincare benefits. In dietary supplements, bovine bone collagen peptides are believed to support joint health, bone density, and skin elasticity. In cosmetic products, they are commonly included for their moisturizing properties and potential to promote skin firmness and reduce the appearance of wrinkles.

The global Bovine Bone Collagen Peptide market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
