A Box Compression Strength Tester, also known as a Box Compression Tester or BCT (Box Compression Test) machine, is a specialized testing instrument used in the packaging industry to determine the compressive strength or load-bearing capacity of corrugated boxes and other types of containers. This equipment is crucial for evaluating the ability of packaging materials to withstand the vertical compressive forces experienced during storage, stacking, and transportation.

BCSTs may have become more automated and integrated with data collection and analysis systems. Automation can streamline the testing process, improve accuracy, and provide real-time data analytics, making it easier for quality control professionals to assess packaging strength.
