BPA stands for Bisphenol A, a chemical that is often found in consumer goods. It is a colorless solid material that is soluble in organic solvents but is poorly soluble in water. A growing amount of research links Bisphenol A to some major health concerns, such as a higher risk of certain cancers, reduced fertility, diabetes, and birth defects. These concerns even lead to a California ban on BPA. The state also added it to its list of toxic chemicals. BPA-free water bottles reduce these concerns by eliminating the chemical from its material. BPA-free water bottles can be used without the risk of BPA consumption.
