BPM-platform-based case management softwares are configurable 'apps' meant to help solution architects accelerate the delivery of unique and flexible case management solutions. Case management frameworks (CMFs) are commercial software offerings designed to reduce the time and complexity of creating case-style process solutions by providing architectural patterns and at least some business domain capabilities 'out of the box.' Work is caselike when each work item - each case - requires unique handling, involving complex interactions between content, people, transactions and business or regulatory policies in order to deliver an optimal outcome. Case-style processes do not progress in a serial or completely predictable fashion. Rather, they often require multiple dependent workflows to be orchestrated, making them particularly complex to architect. Very often, caseworkers need the flexibility to decide the best next action for a case, rather than following a prescribed workflow.
