The report requires updating with new data and is sent in 48 hours after order is placed.

The global BPM-Platform-Based Case Management Softwares market size is predicted to grow from US\$ 1277 million in 2025 to US\$ 2084 million in 2031; it is expected to grow at a CAGR of 8.5% from 2025 to 2031.

BPM-platform-based case management softwares are configurable 'apps' meant to help solution architects accelerate the delivery of unique and flexible case management solutions. Case management frameworks (CMFs) are commercial software offerings designed to reduce the time and complexity of creating case-style process solutions by providing architectural patterns and at least some business domain capabilities 'out of the box.' Work is caselike when each work item - each case - requires unique handling, involving complex interactions between content, people, transactions and business or regulatory policies in order to deliver an optimal outcome. Case-style processes do not progress in a serial or completely predictable fashion. Rather, they often require multiple dependent workflows to be orchestrated, making them particularly complex to architect. Very often, caseworkers need the flexibility to decide the best next action for a case, rather than following a prescribed workflow.

The industry's leading producers are Pegasystems, Hyland and Appian, which accounted for 19.18%, 9.73% and 12.17% of revenue in 2019.
