According to our LPI (LP Information) latest study, the global BPO market size was valued at US\$ 182400 million in 2023. With growing demand in downstream market, the BPO is forecast to a readjusted size of US\$ 278240 million by 2030 with a CAGR of 6.2% during review period.

The research report highlights the growth potential of the global BPO market. BPO are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of BPO. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the BPO market.

BPO is a segment of outsourcing, which consists of subcontracting the business processes of an organization to a third-party vendor that has expertise in required domains. It is an effective strategy of delegating one or more business activities to external companies (vendors), which, in turn, administer and manage the selected activity, based on defined and measurable performance criteria. It helps client firms to increase their operational efficiency, concentrate on their core competencies, reduce time to market, obtain access to fresh talent and experience along with latest technologies, and build an organization with an economical cost structure in the long run.

Human labor is required in most business processes for productive delivery. Resorting to BPO which provides human labor at a lower cost helps companies maximize their

ROI in such a situation. Growing competition also demands continuous innovation. By outsourcing some tasks, companies can focus more on their core activities to bring about innovation in their products as well as services. Furthermore, developments in IT and telecommunications infrastructure have enabled companies to transfer data to any place in the world. One of the major restraints to the growth of this market is the issue of security of valuable data. The client firm provides sensitive data to the service provider firm, which if misused can prove to be harmful to the interests of the client firm. Other factors such as loss of control of operations of processes, financial instability of the vendors, loss of expertise, etc. are some of the restraints to the growth of the BPO market. Problem of high attrition rates amongst workers is also one of the challenges faced by the BPO industry as the workers show a tendency of not pursuing BPO as a full time career.
