Brachytherapy is referred to as sealed source radiation therapy because the radiation source is sealed and placed inside or near the body part requiring radiation therapy. Besides the treatment of most body part tumors, brachytherapy is commonly used to treat the cancers of the cervix, breast, skin, and prostate. The radiation source is enclosed in a protective wire or a protective capsule and ionizing radiations escape to treat the surrounding cancerous tissues only while avoiding its effects on body fluids.

According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The global healthcare spending contributes to occupy 10% of the global GDP and is continuously rising in recent years due to the increasing health needs of the aging

population, the growing prevalence of chronic and infectious diseases and the expansion of emerging markets. The medical devices market plays a significant role in the healthcare industry.
