According to this study, the global Brain Network Connection Data Processing Platform market size will reach US\$ 2010 million by 2031.

The brain network connection data processing platform is a specialized software system that integrates multiple neuroimaging data analysis functions. It is used to process, analyze and visualize brain connectomics-based data, especially brain network connection information obtained from technologies such as functional magnetic resonance imaging (fMRI), diffusion tensor imaging (DTI) and electroencephalography (EEG/MEG). The platform constructs a structural or functional connection matrix between brain regions, extracts graph theory indicators, supports multi-dimensional data fusion and statistical analysis, and helps researchers to deeply understand the network organization pattern of the brain in healthy states and neuropsychiatric diseases. It is widely used in brain science research, neurological disease diagnosis, clinical intervention evaluation, and personalized medicine, and is an important tool for advancing cognitive neuroscience and brain disease mechanism research.
