A Brake Automatic Slack Adjuster (ASA) is a vital component of an air brake system, primarily used in heavy-duty commercial vehicles such as trucks, buses, and trailers. Its main function is to automatically maintain the proper clearance between the brake drum and the brake linings as the friction material wears down over time. Unlike manual slack adjusters that require periodic human intervention, automatic slack adjusters continuously compensate for brake wear, ensuring consistent braking performance, improved safety, and compliance with regulatory standards. These devices are typically connected to the S-cam shaft of the brake assembly and use internal mechanisms—either clearance-sensing or stroke-sensing—to detect and correct excessive brake slack during brake application. By keeping the brake stroke within a safe range, ASAs reduce the risk of brake failure, extend component life, and help prevent violations during brake inspections.

United States market for Brake Automatic Slack Adjuster is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
