A brake pad silencer shim, also known as a brake pad anti-rattle shim or noise reduction shim, is a thin piece of material (often made of rubber, steel, or other composite materials) that is placed on the back of a brake pad. The primary purpose of the silencer shim is to reduce noise and vibration that can occur when the brake pad makes contact with the brake caliper during braking. The shim helps dampen vibrations and prevent brake squeal, providing a quieter and smoother braking experience for the driver. It also helps to minimize wear and tear on the brake components by reducing excessive movement and noise.

The global Brake Pad Silencer Shim market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
