Brake pedal assembly is a component of a vehicle's braking system responsible for transmitting the driver's input to the brake system, activating the brakes to slow down or stop the vehicle. Typically consisting of a pedal arm, pedal pad, linkage, and pivot mechanism, the assembly converts the mechanical force applied by the driver's foot into hydraulic pressure, which then engages the brakes. Modern brake pedal assemblies often incorporate sensors and electronic components for advanced safety features such as anti-lock braking systems (ABS) and electronic stability control (ESC), ensuring optimal braking performance and driver control in various driving conditions.

The global Brake Pedal Assembly market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
