The braking resistance box product is a resistance box composed of corrugated resistors, suitable for high-power and high current braking equipment, testing equipment, elevators, cranes and other energy consumption braking circuits of frequency converters. The braking resistance box is applied in the process of rapid motor parking. In order to protect the frequency converter from the harm of motor regenerative energy, the regenerative energy generated during the rapid motor braking process is directly consumed and converted without feedback to the power network, thereby ensuring the smooth operation and safety of the power network. It is also widely used in the braking of electric locomotives and electric drive diesel locomotives.
