The global Breach and Attack Simulation Software market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Breach and attack simulation software is a tool used to simulate various cyberattack scenarios, helping organizations assess their network security defense capabilities. By simulating hacker attack techniques, it identifies system vulnerabilities and weaknesses, and provides improvement recommendations. This software is widely used in network security, information technology, and risk management fields.

The breach and attack simulation software industry is experiencing rapid growth. On the upstream side, the increasing demand for network security technology, threat intelligence, and artificial intelligence algorithms is driving innovation and development in related fields. On the downstream side, with the frequent occurrence of cyberattacks and stricter regulatory requirements, organizations' demand for such software is also expanding. In terms of product specifications, software features are becoming increasingly comprehensive, covering vulnerability scanning, attack simulation, risk assessment, report generation, and more. The future market size is expected to continue growing, driven primarily by the increase in cyber security threats, the strengthening of data privacy regulations, and increased investment in network security by organizations.
