According to our LPI (LP Information) latest study, the global Breast Biopsy market size was valued at US\$ 517.2 million in 2023. With growing demand in downstream market, the Breast Biopsy is forecast to a readjusted size of US\$ 919.6 million by 2030 with a CAGR of 8.6% during review period.

The research report highlights the growth potential of the global Breast Biopsy market. Breast Biopsy are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Breast Biopsy. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Breast Biopsy market.

A breast biopsy is the procedure of locating a diseased tissue in the breast and collecting the specimen sample of the area for further examination and diagnosis. Breast biopsies are performed by using minimally invasive biopsy systems, owing to minimal disfigurement and pain. Non-invasive biopsy techniques provide preventive measures that assist physicians in diagnosing and treating high-risk breast cancer. This information prevents the application of chemotherapy in breast cancer, reducing the complexities of chemo-radiations. Vacuum assisted breast biopsy devices (VAB), core needle biopsies and fine needle aspiration biopsy are commonly used to perform biopsy procedures.

Approximately 12% women in the U.S. are likely to develop breast cancer during their

lifetime. Factors contributing to rise in breast cancer cases is over consumption of alcoholic drinks, lack of physical exercise, improper diet and eating habits, high level of hormonal imbalance & exposure of skin to intense sunlight. However, limited awareness among female population and substandard healthcare facilities especially in developing regions are the factor restraining the growth of breast biopsy market.
