A Breast Electrical Impedance Tomography Device is a specialized medical electronic instrument used for breast examination. Its core function is to generate an image of the electrical impedance distribution inside the breast by measuring electrical signals on the body surface, thereby providing doctors with diagnostic information. The upstream sector is the technological source and innovation engine of the EIT industry, mainly focusing on core components, algorithms, and basic research. Electrodes and sensors are key components that directly contact the human body and collect signals. Flexible electrodes and high-performance biosensors represent the forefront of technology. Dedicated chips and electronic components are responsible for generating safe, weak excitation currents and processing the received weak voltage signals. These include high-precision analog front-end chips and signal processors, which are crucial to the signal-to-noise ratio and imaging quality of the instrument. Other hardware includes basic electronic components such as power modules and data acquisition boards required by the system. Software and algorithms are the "brain" of EIT technology. Due to the severe nonlinearity and ill-posedness of EIT problems, how to quickly and accurately reconstruct the impedance distribution image inside the human body from

boundary voltage data is a core technological barrier. Currently, artificial intelligence (AI) has been used to optimize algorithms, significantly improving imaging speed and clarity. The midstream sector is the link that integrates upstream technologies into the final product, namely, the manufacturers of EIT equipment. The downstream sector is where the value of EIT technology is ultimately realized, determining the direction of industry development. End users are mainly hospitals, especially intensive care units (ICUs), respiratory departments, and neurosurgery departments in tertiary hospitals. With the development of portable devices, their applications are gradually extending to community hospitals for chronic disease screening.
