Breast lifting is the technique to raise breast by removing surplus skin and tightening the contiguous tissues to reshape and support the breast contour. It is done to reinstate better breast shape after pregnancy & breastfeeding and to recover breast contour after substantial weight loss. Greater prominence on physical appearance and rapid technical advancements intensifies the growth in number of breast lifting procedures in established countries. The suitable technique for the process is determined on the basis of degree of breast sagging, breast size & shape, size and position of your areolas skin quality & elasticity and the amount of extra skin.
