The global Breast Patch market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Breast cancer is one of the most common malignant tumors that threaten women"s health and affect their quality of life. Breast reconstruction after modified total mastectomy can improve patients" quality of life and reduce the physical impact and psychological distress of breast loss. Breast reconstruction methods are mainly divided into prosthetic reconstruction and autologous tissue reconstruction. Among them, prosthetic reconstruction has become the most commonly used breast reconstruction method due to its advantages such as short operation time, fast postoperative recovery, no donor site damage, and safety and reliability. At present, prosthetic breast reconstruction generally adopts the implantation of the prosthesis behind the pectoralis major muscle, that is, after the pectoralis major muscle is freed, a space for the prosthesis is created between the pectoralis major muscle and the sternum. In order to "lengthen" the pectoralis major muscle and reduce tension, the "biplane method" is often selected clinically, and a biological patch is used to cover and fix the prosthesis with acellular dermal matrices (ADM) during the operation. ADM has excellent biocompatibility and three-dimensional network structure, which can provide support for cell adhesion, growth and proliferation, but it is also accompanied by some complications, such as infection, seroma, hematoma, capsular contracture, flap necrosis, and prosthesis removal etc. At the same time, the higher price also affects its wide application. Based on this, various non-biological patches are gradually applied to the clinical research of breast reconstruction.

The global medical device market is estimated to be US$603.3 billion in 2023, and is expected to grow at a CAGR of 5% over the next six years. At present, global health care expenditure accounts for about 10% of global GDP, and the proportion will continue to increase in the next few years. It is mainly due to the increasing demand for
