Breathable airslide fabrics are specialized textile materials designed for pneumatic conveying applications, particularly in industries such as cement, food processing, and chemical processing. These fabrics feature a porous structure that allows for the passage of air or gas while effectively containing and conveying bulk materials such as powders, granules, and other free-flowing substances. Typically made from woven polyester or polyamide materials, breathable airslide fabrics offer high tensile strength, durability, and resistance to abrasion, making them suitable for use in demanding industrial environments. The permeable nature of these fabrics facilitates the controlled movement of materials along conveyor systems powered by air pressure, enabling efficient and reliable transportation of bulk solids within processing facilities.

The global Breathable Airslide Fabrics market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
