A breathable pouch is a modified form of a pouch with micro or macro perforation technology which helps in keeping the packaged product fresh for a longer time. This pouch uses advanced packaging technology to promote the product and utilizes full micro laser perforation or macro punched perforations to minimize “sweating” in the packaging. This, in turn, helps to keep the product looking fresh and also it helps in extending the shelf life of the product. Breathable pouches are made of PP or PE which are recyclable and more sustainable which in turn leads to optimization waste of product and packaging. Along with the sustainability aspect, these pouches also provide end-user or customer satisfaction while making the purchase of a product with excellent seal property due to co-extrusion avoiding curling effects. Breathable pouches are the perfect alternative to other conventional plastic wrap or stocked catch-all checkout pouches in terms of numerous benefits. Breathable pouches are an excellent option for a manufacturer to extend the shelf life of the product and even for the consumer as they

provide exceptional consumer satisfaction while making a product purchase thereby giving a great consumer experience. Breathable pouches are used in various packaging applications such as food and beverages especially in the bakery and confectionary segment, healthcare, etc.
