The global Breathable Roof Membrane & Felt market size is predicted to grow from US\$ 828 million in 2025 to US\$ 1664 million in 2032; it is expected to grow at a CAGR of 10.7% from 2026 to 2032.

A membrane is a thin, flexible sheet of material that can form a lining or barrier. The breathable membrane refers to a semi-porous sheet or foil that exchanges water vapor and prevents the diffusion of liquid water. The breathable membrane keeps water out of the roof structure and ensures cool and warm ventilation. It can also be used as a secondary protective layer to prevent external pollution such as dust and rain, thereby protecting the structure from damage. High humidity in buildings can cause serious problems such as mold growth, damp stains, corrosion, deterioration, and poor insulation; however, these problems can be solved by using breathable membranes.
