Bright Strip Steel is one kind of strip steel, the thickness of strip is generally in 0.1-3mm, the width is in 100-200mm plate. The surface of Bright Strip Steel is bright and clean, flat and neat, with high dimensional accuracy, which has very good use effect. The Bright Strip Steel is cold rolled in the cold state, during the process of softening the steel, the method of softening is to use the annealing process to restore its plasticity and facilitate processing. Before cold rolling the strip, the iron oxide is removed from the surface to ensure a clean surface and reduce wear. Bright Strip Steel has excellent corrosion and rust resistance, a smooth and clean surface, good aesthetic properties, small thickness deviation compared to traditional steel, uniform thickness in width and length, and good plate shape. It has been widely used in machinery manufacturing and automobile manufacturing industries.
