The global Brine Chillers market size is predicted to grow from US$ million in 2025 to US$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Brine Chillers are widely used in low temperature cooling applications(?0?). The low viscosity and non-volatility of brine make it suitable for cooling projects that ethylene glycol cannot.

The market for brine chillers is in a phase of rapid growth, continuously expanding in size. These units find extensive applications in industrial refrigeration, such as food processing, pharmaceutical manufacturing, and chemical production, providing low-temperature coolant to maintain production efficiency. In the future, with strengthened environmental regulations and technological advancements, brine chillers are poised for further development to meet market demands in a more efficient and environmentally friendly manner.
