The global Broad-Spectrum Optical Frequency Comb market size is predicted to grow from US\$ 50.13 million in 2025 to US\$ 71.44 million in 2032; it is expected to grow at a CAGR of 5.3% from 2026 to 2032.

A broad-spectrum optical frequency comb is a mode-locked laser that is frequency and phase locked. This broad-spectrum frequency comb laser has strictly equal frequency intervals in the frequency domain, similar to the teeth of a comb. Broad-spectrum frequency comb is another major breakthrough in the field of laser technology after the advent of ultra-short pulse laser. With the rapid development of optical communication technology, broad-spectrum frequency comb has attracted more and more scholars' attention due to its wide application in optical arbitrary waveform generation, multi-wavelength ultrashort pulse generation and dense wavelength division multiplexing.

The market trend for optical frequency combs is quite promising. These instruments are widely used in precision measurement and frequency calibration in scientific research, industrial applications, and medical fields. As technology continues to advance, the demand for optical frequency combs is expected to grow, especially in areas such as spectroscopy, optical clocks, and optical communications. Additionally, with the maturation of laser technology and decreasing costs, optical frequency combs are becoming more accessible. Looking ahead, as optical frequency comb technology continues to innovate and find new applications, the market trend is expected to become even more diverse and expansive.
